

GOKULA KRISHNAN S

Python Full Stack Developer

📞 9360653789

✉️ sgokulakrishnan105@gmail.com

📍 Chennai

SUMMARY

Python Full Stack Developer with 2.1+ years of experience building scalable, cloud-native web applications using Django, React, and AWS. Skilled in designing high-performance REST APIs, deploying containerized microservices, and integrating machine learning models into production systems. Proven ability to improve application performance, automate deployments, and build secure, real-time data-driven platforms. Strong experience working in Agile environments with cross-functional teams.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, React, Bootstrap

Backend: Python, Django, Flask, REST APIs, ORM

Database: MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS (ECS, EC2, S3, RDS, CloudWatch), Docker, GitHub Actions

Tools: Git, GitHub, Postman, VS Code

Methodology: Agile/Scrum

PROFESSIONAL EXPERIENCE

Full Stack Python Developer

Octoze Technologies Pvt Ltd., Chennai

April 2024 - Present

- Developed and maintained scalable full-stack web applications using Django and Flask
- Designed and implemented RESTful APIs, enabling seamless frontend-backend integration
- Built responsive UI components using React, improving user experience and usability
- Implemented JWT-based authentication and role-based access control, enhancing application security
- Improved application performance through query optimization and caching strategies
- Automated build and deployment pipelines using Docker and GitHub Actions, reducing deployment time
- Collaborated with UI, QA, and DevOps teams in Agile/Scrum environments for faster delivery cycles
- Conducted code reviews and implemented unit testing using PyTest, ensuring high code quality

PROJECT

AI-Powered Clinical Heart Monitoring Platform

Client Name: Medindia

Tech Stack: Django, DRF, React, PostgreSQL, AWS (ECS, S3), Docker, Celery, scikit-learn, GitHub Actions.

Project Summary

Designed and developed a cloud-based clinical monitoring system to process and analyze ECG and device telemetry data. Integrated a machine learning model to predict arrhythmia risk, enabling real-time monitoring and insights for healthcare professionals.

Key Contributions

- Built secure REST APIs using Django & DRF to handle high-volume telemetry data ingestion
- Processed and stored large ECG waveform datasets using AWS S3 and PostgreSQL (RDS)
- Designed data pipelines for validation, normalization, and deduplication, improving data accuracy
- Developed and deployed a machine learning model (scikit-learn) for arrhythmia risk prediction
- Containerized ML inference service using Docker and deployed on AWS ECS Fargate
- Achieved sub-200ms latency for real-time prediction responses
- Implemented JWT authentication with role-based access (Doctor/Admin/Device), ensuring secure PHI handling
- Built interactive React dashboards displaying ECG data, alerts, and patient insights
- Set up CI/CD pipelines using GitHub Actions for automated build and deployment
- Integrated CloudWatch and Sentry for monitoring system performance and error tracking

EDUCATION

Panimalar Engineering College | 2017 - 2021

B.E – Mechanical Engineering

IIKM The Corporate B School | 2021 – 2023

MBA- Digital Marketing
